

PUBLIC OUTREACH

The overall twin goals of the FESC Outreach effort are to increase Florida’s energy use efficiency and to measurably reduce its emissions of greenhouse gases. Dr. Pierce Jones, Professor and Director, Program for Resources Efficient Communities, UF, leads outreach through his experience with the Florida Cooperative Extension Service.

Education

Florida’s utilities have predicted that the State’s energy use will increase significantly in the coming years. Energy efficiency and renewable energy generation are vital to meeting this demand. FESC’s statewide education program will produce a workforce trained to meet Florida’s energy needs. Explore the sub-menus on the left side of this page for Florida energy education opportunities sorted by discipline, institution, and degree program, along with training providers and other energy education-related resources.

ENERGY AWARENESS

Energy Saving P.S.A Videos

These Public Service Announcements were created by The Center for the Advancement of Environmental Media Production and Research at Florida State University. This series of videos is designed to positively influence citizen’s environmental conservation attitudes and behaviors.
